

EZ-Up Economy

Your best solution for economical growing space

Easy to install

- Quick to build, easy and inexpensive to maintain
- Strong enough for a variety of growing needs and climatic conditions
- Fabricated with low-maintenance galvanized steel frame and gutters
- Glazed with a wide choice of economical materials

Steel, peak-roof EZ-Up Economy series greenhouses cover your crop efficiently and inexpensively, paying dividends in reduced maintenance costs for years to come. This strong, versatile design easily accommodates climatic conditions throughout most of the country.

The EZ-Up Economy Peak greenhouse offers growers the same features that our more expensive houses do: strength, flexibility of design and unlimited expandability. The low-maintenance, galvanized, rust-resistant frame features factory-assembled trusses that attach to columns with a single bolt. The result is an inexpensively assembled house with minimal upkeep requirements.

When you choose an EZ-Up Economy Peak House, you get the growing space you need at the price you want

But a lower investment doesn't mean you sacrifice quality.

Strength is assured through a unique design that disperses loads across all members, providing significantly greater resistance to side and downward stresses. The 14-gauge galvanized steel gutters are butt-spliced and sealed to guarantee tight joints. The entire design, including structural components, was subjected to computerized structural analysis, and approved by independent engineers to ensure the integrity of the house.

Design flexibility enhances the inherent strength of the house. The house is available in five

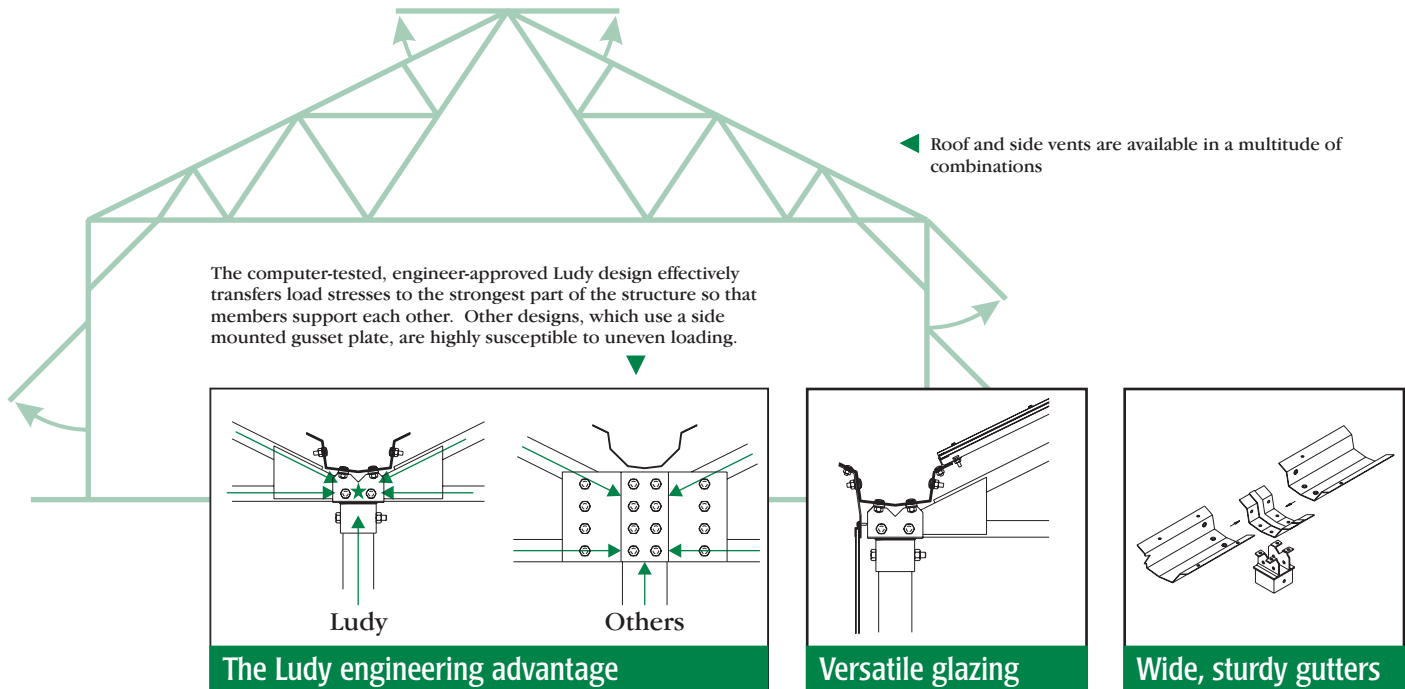

different widths, with 8-, 10- or 12- foot standard sidewalls (even higher if necessary). The house can grow as you do—we can build one or ten. You can add on later, attaching to either end, either side or both. When you choose an EZ-Up Economy Peak greenhouse, you get the economical covered growing space you need without paying for features you don't want.

A wide variety of materials, including energy-efficient structured sheet, easy-to-install corrugated polycarbonate or metal—even shade cloth—lets you choose the glazing that is most appropriate for your environment and budget. On-site construction costs are reduced by using factory-welded, predrilled components, including trusses that connect to columns with a single bolt. Galvanized steel keeps maintenance expenses to a minimum.

Engineered for value from the ground up, the EZ-Up Economy Peak greenhouse combines the best of two worlds: appropriate environmental control and low cost of ownership. To find out more about how the affordability, strength and flexibility of an EZ-Up Economy Peak greenhouse fits into your future, call Ludy for a consultation or quotation today.

Specifications

EZ-Up Economy

Construction

- All structural components are pre-galvanized, rust-resistant steel.
- Post: 3" square pre-galvanized, rust-resistant steel
- Trusses: 1 1/2" square; factory welded design to center on and attach directly to post top with a single bolt.
- Purlins: 2" square pre-galvanized, rust-resistant steel
- Bracing: roof wind X-bracing, sidewall X-bracing, gable bracing and knee bracing included

Gutters

- 10 inch wide, made with high strength steel, sealed at each post using gutter splice
- Various extension lengths are available along with down spout connector and drip channels

Sizes

- Widths: 20.5, 25, 30, 35.5 and 41.5 feet (6.25, 7.62, 9.14, 10.82 and 12.65 m)
- Lengths: standard 10 or 12 foot bays; full length can be any multiple of chosen bay size
- Sidewall: standard 8, 10, or 12 feet; higher walls available

Glazing options

- 8mm polycarbonate structured sheet in 4 or 6 feet bar spacing
- 16mm polycarbonate structured sheet
- Corrugated polycarbonate
- Glass (annealed, tempered or laminated)
- 16mm or 8mm acrylic structured sheet
- Corrugated metal
- Shade Cloth
